PROJECT SUBMISSION

Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

Platform	ServiceNow
Technology	Flow Designer
Process	Standard Laptop Procurement
Automation Goal	Automatically create and assign a Catalog Task after request approval

A ServiceNow Flow Designer solution for reducing manual intervention, processing delays, and task-assignment errors in standard laptop procurement.

1. Problem Identification

The current IT procurement process for standard laptop orders involves several manual steps. After a laptop request is approved, the configuration task may not be created or assigned immediately to the Hardware team.

This can cause delays in laptop configuration, increase the manual workload for IT staff, and make users wait longer to receive their laptops.

2. Problem Statement

The existing process for handling standard laptop requests is not fully automated. Manual task creation and assignment can lead to delays, inconsistencies, and errors.

Therefore, an automated solution is required to create a configuration task automatically after the Standard Laptop request is approved and assign the task to the Hardware team.

3. Proposed Idea

The proposed solution is to use ServiceNow Flow Designer to automate the standard laptop procurement process.

When a user places a Standard Laptop request through the Service Catalog and the request is approved, the Flow will automatically create a Catalog Task. The task will contain the required description and will be assigned to the Hardware assignment group for laptop configuration.

4. Proposed Workflow

User places Standard Laptop request	Service Catalog	Standard Laptop	Request Approval	Request Approved	Flow Designer Trigger	Create Catalog Task	Assign to Hardware Team	Laptop Configuration

Automation logic: Once the Standard Laptop request reaches the approved state, the Flow Designer flow is triggered. It creates the required Catalog Task and routes it to the Hardware assignment group for configuration.

5. Objectives

- Automate the standard laptop procurement process.
- Automatically create configuration tasks after approval.
- Automatically assign tasks to the Hardware team.
- Reduce manual intervention.
- Reduce processing delays.
- Improve IT resource utilisation.
- Provide faster service to users.

6. Expected Benefits

- Faster laptop configuration.
- Reduced manual work for IT staff.
- Fewer chances of task assignment errors.
- Better task management and visibility.
- Improved productivity of the IT team.
- Reduced waiting time for users.
- More efficient IT procurement process.

7. Technology Used

Platform	ServiceNow
Technology / Feature	Flow Designer
Module	Service Catalog
Module	Flow Designer
Module	Catalog Tasks
Module	Maintain Items

8. Expected Outcome

After successful implementation, an approved Standard Laptop request will automatically generate a Catalog Task. The task will be assigned to the Hardware team, enabling the team to begin laptop configuration without requiring manual task creation or assignment.
