PHASE 2 – REQUIREMENT ANALYSIS

Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

1. Project Requirement

The project requires automation of the Standard Laptop procurement process in ServiceNow. After the laptop request is approved, a Catalog Task should be created automatically and assigned to the Hardware team.

2. Functional Requirements

No.	Requirement
1	User should be able to submit a Standard Laptop request through Service Catalog.
2	The system should identify when the request is approved.
3	Flow Designer should trigger automatically after approval.
4	A Catalog Task should be created automatically.
5	The Catalog Task should contain the required configuration details.
6	The task should be assigned to the Hardware assignment group.

3. Non-Functional Requirements

• Reliability: The flow should create the task consistently after approval.
• Performance: Task creation should happen without unnecessary delay.
• Accuracy: The task must be assigned to the correct Hardware group.
• Maintainability: The flow should be easy for the ServiceNow administrator to maintain.

4. Inputs and Outputs

Inputs	Standard Laptop request, requester details, request approval status.
Trigger	Request status becomes Approved.
Output	Catalog Task created and assigned to the Hardware team.

5. Technology Required

• Platform: ServiceNow
• Technology: Flow Designer
• Modules: Service Catalog, Maintain Items, Catalog Tasks

6. Expected Requirement Outcome

When a Standard Laptop request is approved, ServiceNow Flow Designer should automatically create a Catalog Task with the required details and assign it to the Hardware team. This removes the need for manual task creation and assignment.
