PHASE 3 – PROJECT DESIGN

Project: Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

1. System Design

The system is designed to automate the creation and assignment of a Catalog Task after a Standard Laptop request is approved in ServiceNow.

2. Proposed Workflow

Step	Process
1	User submits Standard Laptop request through Service Catalog
2	Request goes through approval process
3	Approval status becomes Approved
4	Flow Designer is triggered automatically
5	Catalog Task is created with configuration details
6	Task is assigned to Hardware assignment group

3. Main Components

• Service Catalog – Standard Laptop request form
• Approval – Request approval process
• Flow Designer – Automation trigger and actions
• Catalog Task – Task created for laptop configuration
• Hardware Assignment Group – Receives the configuration task

4. Design Logic

Trigger: Standard Laptop request is approved → Action: Create Catalog Task → Assign task to Hardware → Hardware team performs laptop configuration.

5. Expected Design Outcome

The designed flow removes manual task creation and assignment after approval, providing a consistent and faster laptop procurement workflow.
