# PHASE 6 – PROJECT TESTING

**Project:** Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

## 1. Testing Objective

To verify that the ServiceNow automation works correctly from Standard Laptop request submission through approval, Catalog Task creation, and Hardware assignment.

## 2. Test Cases

| Test Case | Expected Result |
|---|---|
| Submit Standard Laptop Request | Request is created successfully in Service Catalog |
| Approve the Request | Approval status changes to Approved |
| Flow Trigger | Flow Designer starts automatically after approval |
| Catalog Task Creation | Catalog Task is created with required details |
| Task Assignment | Task is assigned to Hardware assignment group |
| Complete Workflow | Hardware team can view and process the task |

## 3. Testing Method

Functional testing is performed by creating a Standard Laptop request, approving it, and checking whether the Flow automatically creates and assigns the Catalog Task.

## 4. Validation Points

• Correct trigger condition
• Correct Catalog Task creation
• Required task details are populated
• Hardware assignment group receives the task
• No manual task creation is required

## 5. Testing Outcome

The project is considered successful when an approved Standard Laptop request automatically creates the required Catalog Task and assigns it to the Hardware team.
